NSTC 047, OSHA RECORDKEEPING SEMINAR

(3 Hours)

This seminar will assist the student in understanding the new OSHA rules and requirements for record keeping. The 29 CFR 1940 Recording and Reporting Occupational Injuries and Illnesses has been completely revised and the new rules took effect on January 1, 2002. Everything concerning this new standard from the scope of "who must comply", to the new more specifically defined "work-related recording criteria" is outlined in this seminar. Several examples of the "old rule" compared to the "new rule" are presented to aid those making the transition. Workshop activities accomplished during class include discussion of some "sanitized" case histories for determination of "recordables." This seminar is recommended for those who are responsible for reporting occupational injuries and illnesses at their work sites.

Target Audience:

- Safety, Reliability, Quality, and Maintainability Professionals
- Supervisors and Managers.
- Anyone who may be responsible for reporting/recording occupational injuries and illnesses in the workplace.

No CEUs are available for this course

Dates:
January 28, 2005
2 classes
8:00-11:00 & 1:00-4:00
